NOTES

- 1. Attach cables and busbars directly to the main terminal pad using the recommended install torque. Do not use washers or other materials between the contactor power terminals and the conductor.
- 2. Contactor may be used above Max Switching Voltage if the application does not require significant load breaking. Please contact Rincon Power for more details.
- 3. Dual coil economizer design: Pickup Voltage must be applied as a pulse. Do not ramp voltage.
- 4. Integrated coil suppression limits back EMF to 0V. External diodes or suppressors do not affect operation.
- 5. Rigid busbar structures have the potential to induce stress into the device and can damage the hermetic seal. When using busbars, it is important to design compliance into the bus bar structure via the use of flexible laminated busbars and or by means of incorporating adjustability in adjacent bolted interfaces.
